Thermal Classifier
(Erebus Day)

L1 data

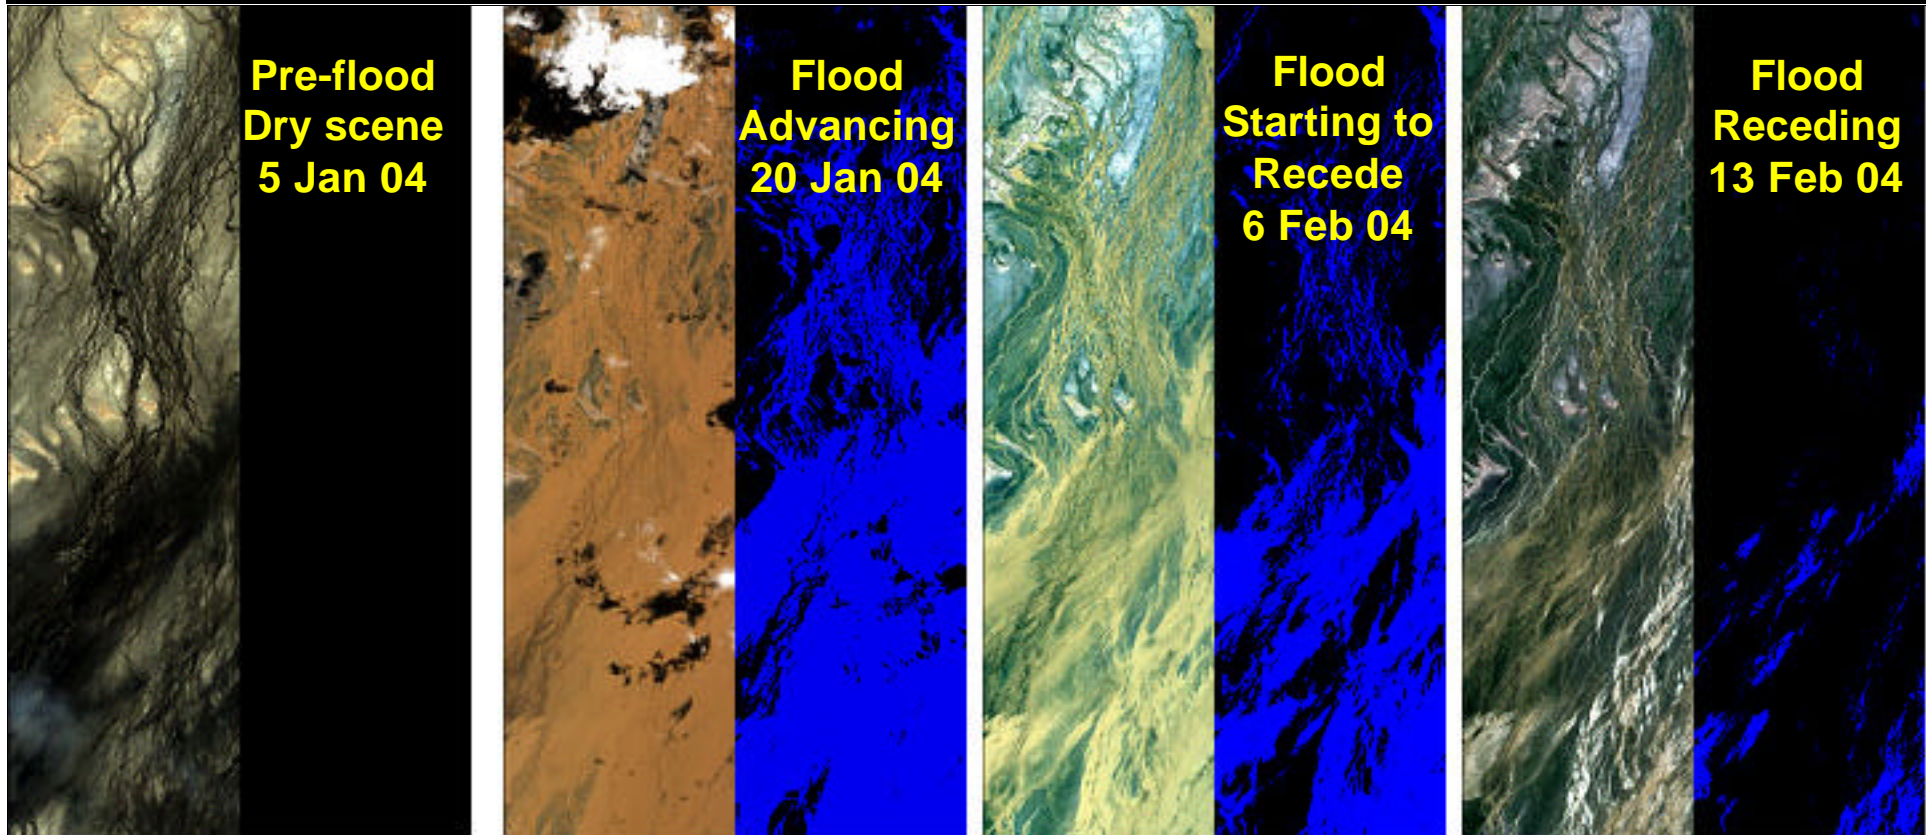

- ASE enabled rapid notification of volcanic event
- ASE enabled rapid re-imaging of this event
- **Autonomous response as normal operations!**
 - Highest leverage for deep space missions

Band	Wavelength, μm	Band	Wavelength, μm
1	0.630	7	2.022
2	1.245	8	2.103
3	1.266	9	2.254
4	1.599	10	2.264
5	1.659	11	2.274
6	1.780	12	2.285

Detection of a Rare Major Flood on Australia's Diamantina River using the ASE "Muddy" Floodwater Classifier

Cause of flooding: Monsoonal rain

Wavelengths used: 0.86 μm and 0.99 μm

V. Baker, F. Ip, & J. Dohm, University of Arizona

Cryosphere Classifier

Deadhorse (Prudhoe Bay), Alaska

29 Feb 04

**Snow on
Sea Ice**

20 Jun 04

Sea Ice

27 Jun 04

Water

-  Snow
-  Water
-  Ice
-  Land
-  Unclassified

Wavelengths used in classifier:
0.43, 0.56, 0.66, 0.86 and 1.65 μm

R. Greeley & T. Doggett
Arizona State University
Planetary Geology Group

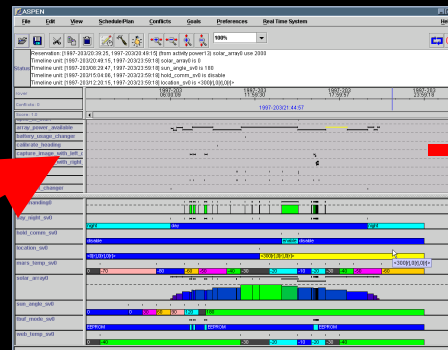

ASE Current Status

- Current count > 5000+ autonomous data collects
 - 1st flights in Fall 2003
- **ASE Software so successful it is now in use as baseline operations for the remainder of the mission (Nov 2004-)**
 - Enabled > 100x increase in science return
 - Measured as: # events captured / MB downlink
 - Enabled a reduction in net operations costs
\$3.6M/year → \$1.6M/yr ; over \$1M of reduction directly from ASE
 - Operations cost reduction critical in enabling extended mission
Oct 2005 – Oct 2007

Sensorweb

Re-tasking

Earth
Observer
One

Triggers so far: Wildfires, Floods, Volcanoes (thermal, ash), Ice/Snow, in-situ sensors, modified by cloud cover

Future Missions

Tracking crustal motion
for Europa Orbiter

Io Volcanism

Europa Cryobot

Comets

Exploring Titan

Ralph Lorenz

Lunar and Planetary Laboratory

University of Arizona

Exploring Titan

- Autonomy Drivers
 - Round trip light time make joysticking untenable
 - Distance and limited power makes downlink limited

Exploring Titan (cont'd)

- Autonomy could enable an aerobot to detect and image transient phenomena
e.g.:
 - Methane Thunderstorms,
 - Methane Geysers, or a
 - Cryovolcano

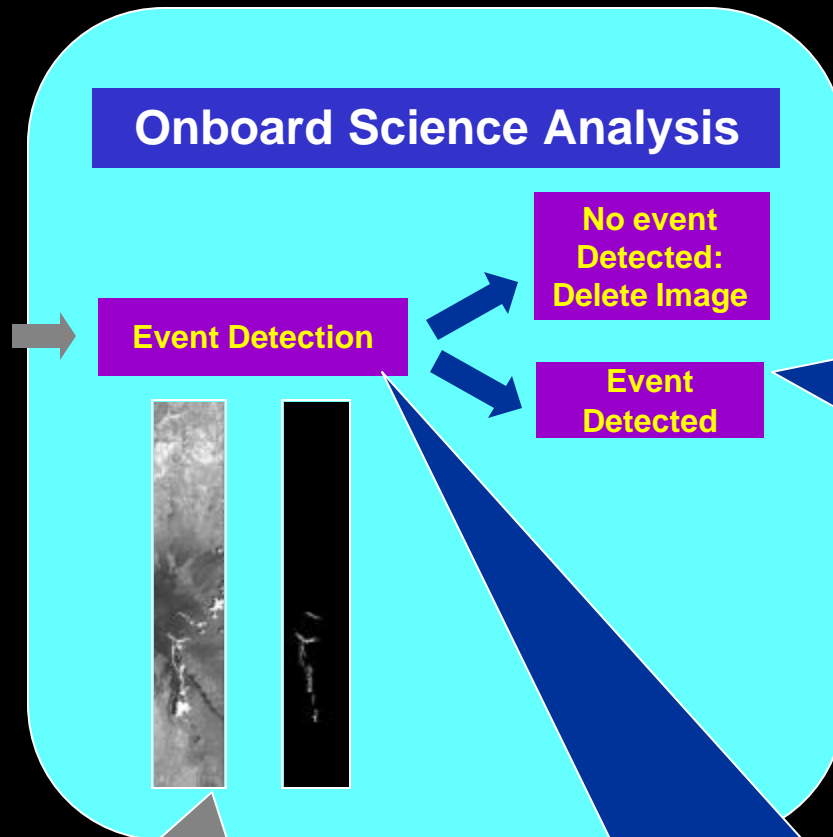

Science Response

Spacecraft

ASE uses state
of the art
Machine
Learning to
detect events in
the presence of
noise

Track a wide range of science
events – floods, volcanoes,
cryosphere, clouds,...

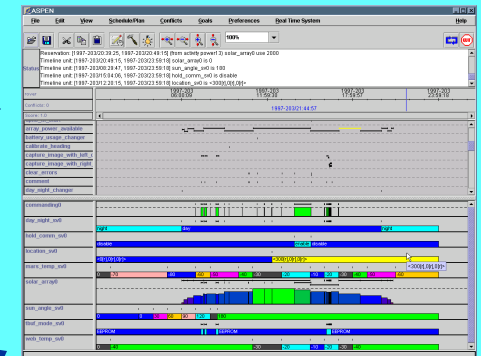

Key Insight: No need to
replicate ground science
analysis – just detect activity

Science Response

continuous planning
- enables seamless
long-duration
operations and
rapid replanning
despite limited
onboard CPU

Autonomous Planning
